## ECOLOGY

VOLUME 99 • NUMBER 3 • MARCH 2018

**COVER PHOTO:** Male Cope's gray tree frog (*Hyla chrysoscelis*) resting on a tree branch at the University of Mississippi Field Station. In their study in this issue of *Ecology*, Resetarits et al. (pp. 661–669; <https://doi.org/10.1002/ecy.2130>) examined the role of patch size and patch quality (perceived predation risk) in habitat selection decisions. Perceived risk and patch size jointly drove perceptions of habitat quality in both females and males. Photo credit: Jason R. Bohenek.
